SLURRY MANAGEMENT SYSTEM
SOLIDS SEPARATOR

Separator TP-01:
Patented system

(*) Check price.

The **Solids Separator** is made totally out of stainless steel that performs the three basic operations of filtering, pressing and scraping in a single system.

The Tecnapur separator has a large filtering surface that can treat up to 20 m3/hour (depending on the amount of solids) and consumes less than 0.75 kw/hour, well below the average consumption of any other machines currently on the market. And this means a huge saving in energy costs.

The Tecnapur Solids Separator can operate automatically and is designed to require very little maintenance and suffers very little wear.
